

Assignment Submission

We will use Cornell's GitHub for assignment submission in this course. An assignment is considered submitted when the *submit.md* file is **signed and** the work is **pushed** to *GitHub*. All work submitted *on time* or by the *late deadline* (deadline + 2 slip days) will **always** be graded for partial credit.

- **Your assignment's submission time is based on the time that you *push* to GitHub.**

Your submission time is **not** based on the time of your last commit (what GitHub shows you).

If you push multiple times, we will take your latest push as your assignment's submission time.

- **Forgetting to push is equivalent to not submitting an assignment** and is not considered a valid excuse for accepting late work.
- Only sign the **submit.md** file when you plan to submit your assignment.

If you plan to use your slip days, do not sign *submit.md* until you are ready to submit.

If we see that you have signed **submit.md** your assignment will be picked up to be graded.

- There is no penalty for failing to sign *submit.md*.

After the late deadline, we will collect your submission and grade it for partial credit regardless of whether you signed *submit.md*.

- **No course work will be accepted via email.**
- Push frequently.

Every time you push, you back-up your current work on GitHub.
